

Physical Therapy, Speech Therapy, and Occupational
Therapy Services for Infants and Children

FREE SPEECH AND FINE MOTOR SCREENINGS

Our therapists travel to local schools and organizations to perform speech and fine motor screenings. Screenings for children who are homeschooled can be scheduled in our office.

SPEECH SCREENINGS

The Fluharty Preschool Speech and Language Screening Test is administered by a licensed Speech Pathologist to rapidly identify preschool children who may benefit from a complete speech and language evaluation.

FINE MOTOR SCREENINGS

A licensed occupational therapist administers a screening tool for fine motor, visual motor and sensory processing skills. Findings are compared with expected age levels.

What is a good reason to schedule a screening?

- If you or your child's teacher have concerns, but you are not ready for a full evaluation or you are not sure that one is necessary.
- You want a professional opinion regarding your child's development.

What is the difference between a screening and an evaluation?

- A screening is brief 20-minute meeting that allows the professional to get some basic information to determine if a more in-depth evaluation is needed.
- An evaluation is in-depth and can result in a diagnosis and a plan of treatment. It requires an intake process and comprehensive testing.
